VOLUME 17 | ISSUE 807 | 16 JUL 2025

Discuss your research with Associate Editor Brandon Berry at the Biomechanics and Mechanobiology of Cardiovascular Disease and Rejuvenation meeting, July 20-25 in Ventura, California.

RESEARCH ARTICLE | CANCER

Systemic administration of an RNA binding and cell-penetrating antibody targets therapeutic RNA to multiple mouse models of cancer

BY ELIAS QUIJANO, DIANA MARTINEZ-SAUCEDO, *ET AL.*

A cell-penetrating and RNA binding antibody forms noncovalent complexes with an immunogenic RNA to target tumors and achieve antitumor efficacy.

RESEARCH ARTICLE | SICKLE CELL DISEASE

Complement is activated in patients with acute chest syndrome caused by sickle cell disease and represents a therapeutic target

BY SATHEESH CHONAT, JAYRE A. JONES, *ET AL.*

The complement system plays a role in acute chest syndrome and contributes to baseline hemolysis in sickle cell disease.

RESEARCH ARTICLE | CANCER

S100A8/A9 perturbation in bone marrow blunts antitumor immunity by promoting protumorigenic myelopoiesis in mouse models

BY WEN LUO, XINGXING SU, *ET AL.*

Systemic S100A8/A9 inhibition triggers immunosuppressive myeloid cell differentiation, whereas tumor-targeted delivery restores tumor control.

RESEARCH ARTICLE | DRUG DELIVERY

Oral delivery of liquid mRNA therapeutics by an engineered capsule for treatment of preclinical intestinal disease

BY XIANGANG HUANG, CHUANG LIU, *ET AL.*

RNACap can orally deliver liquid mRNA therapeutics to the intestines in response to intestinal pH, the resulting pressure release, and contractions.

RESEARCH ARTICLE | CANCER

Targeting SIRT2 induces MLH1 deficiency and boosts antitumor immunity in preclinical colorectal cancer models

BY QIANLING GAO, LANLAN YANG, *ET AL.*

Targeting SIRT2 promotes MLH1 acetylation and degradation, increases $CD8^+$ T cell infiltration and activation, and generates antitumor immune memory.

RESEARCH ARTICLE | TRANSPLANTATION

Donor-recipient mismatch at the *SIRPA* locus adversely affects kidney allograft outcomes

BY DAQIANG ZHAO, HEHUA DAI, *ET AL.*

Donor-recipient SIRPα mismatch, implicated in innate allorecognition and monocyte activation, adversely affects kidney allograft survival in humans.
