FOCUS | ARTIFICIAL INTELLIGENCE

The robot will see you now: Foundation models are the path forward for autonomous robotic surgery

BY MICHAEL YIP

Foundation models in robotics are here to stay, but can surgical robotics keep up with their data-intense requirement?

FOCUS | MEDICAL ROBOTS

Equalizing access: How robotics and AI can transform surgical care worldwide

BY MARTA WEBER, KEE B. PARK, *ET AL.*

The integration of robotics and artificial intelligence holds promise for improving access to surgical care worldwide.

REVIEW | MEDICAL ROBOTS

Medical needles in the hands of AI: Advancing toward autonomous robotic navigation

BY RON ALTEROVITZ, JANINE HOELSCHER, *ET AL.*

AI guidance is enabling robots to perform medical needle-based procedures with greater safety and accuracy.

RESEARCH ARTICLE | MEDICAL ROBOTS

Surgical embodied intelligence for generalized task autonomy in laparoscopic robot-assisted surgery

BY YONGHAO LONG, ANRAN LIN, *ET AL.*

An open-source surgical embodied intelligence simulator for task autonomy enables zero-shot transfer from simulation to the real world.

RESEARCH ARTICLE | MEDICAL ROBOTS

SRT-H: A hierarchical framework for autonomous surgery via language-conditioned imitation learning

BY JI WOONG (BRIAN) KIM, JUO-TUNG CHEN, *ET AL.*

A language-guided imitation learning framework achieves step-level autonomy in robotic cholecystectomy surgeries.
