REVIEW | CELL BIOLOGY

Evolution of growth factor signaling to the TSC complex to regulate mTORC1

BY KUN WANG, SOPHIE E. LOCKWOOD, *ET AL.*

Structural and evolutionary insights are discussed about how the primary brake on mTORC1 activity is lifted.

RESEARCH ARTICLE | NEUROINFLAMMATION

Astrocytic RIPK3 exerts protective anti-inflammatory activity in mice with viral encephalitis by transcriptional induction of serpins

BY MARISSA LINDMAN, IRVING ESTEVEZ, *ET AL.*

The kinase RIPK3 suppresses pathologic neuroinflammation in mouse models of flavivirus infection.

RESEARCH ARTICLE | CANCER

Autophosphorylation of oncoprotein TEL-ABL in myeloid and lymphoid cells confers resistance to the allosteric ABL inhibitor asciminib

BY SERENA MURATCIOGLU, CHRISTOPHER A. EIDE, *ET AL.*

Oligomerization renders the oncoprotein TEL-ABL insensitive to the ABL inhibitor asciminib.

RESEARCH ARTICLE | VASCULAR BIOLOGY

The MDM2-p53 axis regulates norrin/frizzled4 signaling and blood-CNS barrier function

BY JACKLYN LEVEY, MD. ABEDIN, *ET AL.*

Genetically increasing p53 abundance impairs signaling critical for the integrity of blood-CNS barriers.

RESEARCH ARTICLE | NEUROSCIENCE

Restoration of striatal neuroprotective pathways by kinase inhibitor treatment of Parkinson's disease–linked *LRRK2*-mutant mice

BY EBSY JAIMON, YU-EN LIN, *ET AL.*

LRRK2 inhibition restores a cilia-dependent, neuroprotective signaling circuit in Parkinsonian mice.

RESEARCH ARTICLE | BIOCHEMISTRY

A PKCη missense mutation enhances Golgi-localized signaling and is associated with recessively inherited familial Alzheimer's disease

BY MARIA CELESTE GAURON, DMITRY PROKOPENKO, *ET AL.*

An Alzheimer's disease–associated mutation in the kinase PKCη concentrates its activity at the Golgi.

EDITORS' CHOICE | NEURODEGENERATION

Mutant α-synuclein takes down autophagy

BY LESLIE K. FERRARELLI

Parkinson's disease–associated α-synuclein impairs autophagy by hijacking the cell's acetylation machinery.
