RESEARCH ARTICLE | ALLERGY

Primate retroelement exonization and sexually dimorphic *IL13RA1* transcription tune type 2 immune responses

BY TOBIAS PLOWMAN, TOM HOFLAND, *ET AL.*

Co-option of primate-specific retroelements creates an alternative IL-13Rα1 subunit that tunes type 2 immune responses.

RESEARCH ARTICLE | CANCER IMMUNOLOGY

Noncanonical Hedgehog signaling through Smoothened controls cytotoxic T cell migration in the tumor microenvironment

BY CHRYSA KAPENI, LOUISE O'BRIEN, *ET AL.*

Smoothened inhibitors decrease CD8 T cell migration into murine and human tumors.

RESEARCH ARTICLE | MUCOSAL IMMUNOLOGY

Tuft cells restrain intestinal type 2 immunity through the transcription factor Spi-B

BY JIALI WANG, RUOXI SHEN, *ET AL.*

A tuft cell–centric checkpoint imposed by Spi-B restrains excessive intestinal type 2 immunity and maintains immune homeostasis.

RESEARCH ARTICLE | CANCER IMMUNOLOGY

Multimodal delineation of a layer of effector function among exhausted CD8 T cells in tumors

BY ARJA RAY, MOLLY BASSETTE, *ET AL.*

Cd69 mRNA levels distinguish potent and dysfunctional activation among CD69$^+$ CD8 T cells in tumors.

RESEARCH ARTICLE | INNATE LYMPHOID CELLS

Innate lymphoid cells originate from fetal liver–derived tissue-resident progenitors

BY XIANWEI WANG, JIARUI LI, *ET AL.*

Fetal liver–derived ILC progenitors seed peripheral tissues and generate local ILCs independently of the bone marrow throughout life.

The 10 commandments of immunoregulation in lymphoma

BY MARIA DE LOS REYES CAPILLA GUERRA, GABRIEL K. GRIFFIN

IL-10 plays a dual role in diffuse large B cell lymphoma progression and microenvironment, which could be leveraged for immunotherapy.

EDITORS' CHOICE | FOCIS HIGHLIGHTS

TB or not TB: That depends on the antibody Fc

BY SURABHI KUMAR, KEVIN C. O'CONNOR

Fc-swapped variant monoclonal antibodies reveal new mechanisms underlying *Mycobacterium tuberculosis* restriction.
